

I am a **software engineer specializing in cybersecurity**, with a commitment to building secure, reliable, and scalable systems. My expertise spans software development, threat analysis, and secure architecture design, with a strong focus on integrating security principles into every stage of the development lifecycle.

I approach engineering with a **security-first mindset**, ensuring that applications are not only high-performing but also resilient against evolving cyber threats. My work emphasizes secure coding practices, risk mitigation, and continuous improvement to safeguard both technology and the people who depend on it.

My professional objective is to contribute to innovative solutions that strengthen digital security, protect critical data, and enable organizations to operate with confidence in an increasingly complex threat landscape.
